

DEVICE AND METHOD THEREOF FOR TRANSMITTING A MAC SERVICE DATA UNIT IN A NETWORK SYSTEM

Abstract

A device and a method for transmitting a MAC service data unit (MSDU) in a network system are disclosed. The MSDU has a plurality of pieces of frame data. The method includes receiving the pieces of frame data of the MSDU; and when finishing receiving each piece of frame data, even if not all of the pieces of frame data of the MSDU have been received, converting the received piece of frame data into a MAC protocol data unit (MPDU) and outputting the MPDU.
